An online phone book, like the Telkom phone book, provides a quick way to look up numbers of people and businesses you want to call or locate. You can search these sites by name, keywords or location and, sometimes, you can enter a phone number to do a reverse search. Telkom Cell Phone ContractsAs Africa's biggest integrated telecommunications company, Telkom mobile contracts are also part of the company's offerings. One way to access an online phone book is through the browser of your mobile device. To do this, open your device and run a search for either a specific online directory, such as Telkom or WhitePages. Then, find the search box and enter the name of the person or business you want to call. If you're searching in the Telkom directory, expect to find the name, address and phone number of the party you want to call, if they have a listed number. Other information that may be included if you're looking up a business is the company profile and a link to the company website. If you're looking on a site with a map function, you may also see a map with the location pinned and an option to get turn-by-turn directions to the place you're calling. Reverse Phone Number LookupA reverse phone number lookup is done when you have only a phone number and want to know who it belongs to before you call. To do a reverse number lookup, choose a site that offers the service, such as WhitePages, navigate to the phone lookup section and enter the number. Some results may be free, while others may require a fee to unlock the information. Reverse Address LookupA reverse address lookup is another type of search you can do if you only have part of the information about the number you need to find. To do it, you enter the house number and street in one search box and the city and state or zip code in the second search box before running the query. This type of search doesn't deliver consistent results, though it can be useful and delivers some results in map or satellite form. Brief History of Phone BooksThe first printed phone book was handed out in 1878 in New Haven. It was a single printed card with some numbers printed on it. The printed phone books grew in popularity during the decades and centuries. Then, in 2005, the demand for printed phone books started to drop. By 2017, many states in the United States had even made it illegal to print phone books, according to TruthFinder. It evaluates securities and identifies trading opportunities by gathering information by analyzing statistics from trading activity. Using the information you gather from your technical analysis, you can find and make high probability trades. This post goes through exactly what technical analysis is and how you can use it in your own trading to start making trades with different strategies. NOTE: You can get your free technical analysis PDF trading guide below. What is Technical Analysis? Technical analysis trading focuses on charts and graphs and how the different price movements on these charts play out. Understanding these charts and graphs will help you evaluate securities (or Forex pairs and other markets) and forecast the future by analyzing statistics and the price action. Technical analysis traders have a core assumption that the price is always correct. Technical analysis traders are not looking at what could happen with the fundamentals because they believe that all known possible fundamental information is already factored into the current price. Some of the most popular technical analysis strategies include using raw price action, indicators such as moving averages and the MACD, and other strategies such as swing and trend trading. Technical Analysis vs Fundamental Analysis Most traders who are investing over the longer term are using fundamentals. This means that they are looking at and evaluating the overall value of a stock, Forex pair, or other markets. These investors are taking into account everything from potential upcoming announcements, balance sheets, and what the potential future value could be. Technical analysis, on the other hand, is not taking into account these pieces of information. A trader using technical analysis will be using their charts and other statistics to make their trades. The information the technical analysis trader takes into account includes price trends, indicator information, and a range of different chart patterns that could help them find where the price is moving next. Getting Started in Technical Analysis Getting started with technical analysis trading is very easy. Whilst it is easy, that does not mean there is not a lot to learn and that you will be constantly be testing and perfecting new methods. The best way to get started is to get a free set of demo trading charts and beginning to practice some simple technical analysis strategies in a no-risk environment. With a demo account, you can practice your technical analysis without risking any real money and start to use more advanced strategies like the ones we go through below. Mastering Technical Analysis There is a lot to master when it comes to becoming a technical analysis trader. You can choose to use just raw price action, a combination of price action and indicators, or a range of different strategies altogether. No matter what strategy you decide to use, you will need to keep some things in mind that include; You will need to have a solid risk to reward ratio trading strategy. You will need a strategy that can handle losses and make money overall. You will need a strict rule set that is easy to follow and replicate. You will need to track your trading and constantly improve as the markets change. One of the hardest parts of trading technical analysis is that it can be hard to develop a clear rule set for making your trades. This is crucial, so you begin to create consistent and repeatable results in your trading. One way you can do this is with a clear trading plan. Another thing to keep in mind with technical analysis is that you will not win all of your trades. The goal is to have a system that can handle losses, but it consistently makes you money at the end of the month. The Best Technical Analysis Indicators Moving Averages Moving averages are one of the most popular indicators in the world for technical analysis. You can use moving averages for smoothing out the overall price action to find clear trends and dynamic support and resistance. When you combine multiple moving averages on your chart, you can also find high-quality trade signals. At its simplest, the moving average shows you the overall price for a certain period of time. For example, if using 14-period moving averages, then you will see the average price for the last 14 periods plotted as a line on your chart. This can show you the overall direction price has been moving in on that time frame. The two most common moving averages are the SMA: simple moving average and the EMA: exponential moving average. MACD The MACD is another hugely popular indicator used in many different markets by technical analysis traders. The MACD is used to find new trends or momentum. The MACD has three main part that is; MACD line: is created by taking a longer-term EMA and subtracting it from a shorter-term EMA Signal line: used to generate buy and sell signals. Histogram: measures the distance between MACD and its signal line. Fibonacci Tool The Fibonacci tool is an indicator you can use to both make and manage your trades. Fibonacci is formed with a set of key ratio numbers that include 23.6%, 38.2%, 50%, 61.8%, and 100%. These key levels will often work as important support or resistance levels as they are heavily watched and trades by many participants in the market. In the example below price is in a trend lower. After making a retracement back higher, we can see the price move into the 61.8% Fibonacci level, where it finds resistance and sells back lower with the trend. Advanced Technical Analysis Some of the most advanced technical analysis strategies involve combining different methods and strategies. These include combining multiple indicators or combining indicators with price action strategies. In the example below, we are combining multiple moving averages with price action signals. As the chart example shows, we have a moving average crossover that shows us that there is a trend lower. Price then forms a bearish engulfing bar that is a bearish price action signal and is a signal to make short trades with the trend lower. This is just one example of how you can combine strategies for more advanced technical analysis.
